

Admin – Receptionist

Receptionists use a deliberately limited front-desk workspace. Their seeded role supports availability, booking visibility, walk-in creation, and the minimum customer information needed to serve an active booking.

Typical access

- View facility availability and booking status
- Create a confirmed walk-in booking for a genuinely new customer
- Capture cash or permitted transfer details during the walk-in
- See limited customer details needed for the front desk

Not included by default

- Browse the full customer directory
- Verify uploaded customer payments
- Reschedule paid bookings
- View financial reports or exports
- Change pricing, facilities, roles, users, or audit records

Permission note: The seeded Receptionist role has `availability.view`, `bookings.view`, `bookings.create`, and `customers.view_limited`. It intentionally excludes full customer and payment access.

Scenarios in this guide

REC-01	Check availability for a walk-in
REC-02	Validate a walk-in customer
REC-03	Complete a paid walk-in booking
REC-04	Respect receptionist access boundaries

Check availability for a walk-in

Choose the schedule before collecting customer and payment details.

Before you start

You are signed in with Receptionist access and the customer has requested a future schedule.

What you need

Requested facility, date, and duration.

Steps

1

Open Admin, then Walk-ins.

Expected: The date selector, facility list, hourly availability, and pricing labels appear before customer details.

2

Choose the requested date within the booking window.

Expected: Slots refresh and unavailable inventory appears booked/unavailable.

3

Select a facility, then select the first hourly slot; choose enough consecutive hours for the requested duration.

Expected: The selected schedule and VAT-exclusive base amount update.

4

Repeat the schedule back to the customer before entering identity or payment information.

Expected: The customer confirms facility, date, time, duration, and base amount.

Finished when

A valid available schedule is selected and ready for customer validation.

Important notes

- Availability may change until the booking is submitted.
- Do not promise a slot that is shown as booked or unavailable.

ADMIN

Walk-in bookings

Verify the customer first, then create a confirmed desk booking with immediate payment capture.

Pickleball Court 2

Base rates vary by selected schedule

N

Walk-in booking starts with facility, date, hourly slots, and price.

Validate a walk-in customer

Prevent creating a duplicate walk-in account when the customer already uses the booking platform.

Before you start

A valid schedule is selected.

What you need

Customer's full name, email, and mobile number; all are required.

Steps

1

Enter the customer's name, email, and mobile number exactly as provided.

Expected: The form can compare email and mobile details with existing accounts.

2

Run the customer validation step.

Expected: The page identifies whether matching details already exist without exposing an unrelated customer record.

3

If an existing account is found, stop the walk-in flow and ask the customer to sign in on their phone and use the normal booking/payment process.

Expected: No duplicate customer or walk-in booking is created.

4

If the customer is genuinely new, continue to payment capture.

Expected: The form enables the remaining walk-in booking steps.

Finished when

Only a genuinely new customer proceeds through the walk-in creation flow.

Important notes

- Do not change an email or mobile number merely to bypass duplicate detection.
- Never ask the customer to disclose their password or email verification code.

N

Customer validation follows schedule selection.

Complete a paid walk-in booking

Create the customer, payment, and confirmed booking in one front-desk workflow without a payment hold.

Before you start

The schedule remains selected and customer validation confirms a new customer.

What you need

Payment method; transfer reference for a non-cash method; amount collected according to the displayed base amount.

Steps

1

Choose Cash or the accepted transfer method and enter the reference when required.

Expected: Cash does not require a transfer reference; transfer methods retain the reference.

2

Review the customer, facility, schedule, duration, and VAT-exclusive amount.

Expected: The complete before-submit summary is accurate.

3

Submit the walk-in booking once.

Expected: The server revalidates availability and creates the booking only if the slot remains available.

4

Review the green success message and the created booking details page.

Expected: The reference, customer, confirmed status, payment, facility, and schedule are visible.

5

Return to Walk-ins for the next customer.

Expected: The previous form is reset and the booked slot now appears unavailable.

Finished when

A confirmed walk-in booking and payment record exist once, and the details page matches the receipt given to the customer.

Important notes

- Walk-ins do not use the customer's 15-minute payment hold.
- Do not double-click submit if the response is slow; check the booking detail first.

Payment capture and summary are part of the same walk-in workflow.

Respect receptionist access boundaries

Confirm that front-desk duties do not expose customer directories, receipt proof, reports, pricing, or access administration.

Before you start

You are signed in with only the seeded Receptionist role.

What you need

No test data.

Steps

1

Review the admin navigation.

Expected: Only the overview, calendar/availability, walk-in, and other explicitly granted booking links appear.

2

Try opening /admin/customers, /admin/payments, /admin/reports, and /admin/roles directly.

Expected: The server denies each page and does not render sensitive data.

3

Return to Walk-ins and Calendar.

Expected: Permitted pages remain usable.

4

Report unexpected access rather than using it.

Expected: A Super Admin can investigate the role assignment and audit trail.

Finished when

Receptionist access remains limited to front-desk booking duties and minimum customer data.

Important notes

- Direct URL denial is expected behavior, not a system failure.
